IIRC my 3.9 efi used a sixway fuse block to interface with the 110, fuel pump, ign, start, speed pulse, oil pressure, water temp. Just used the engine to ecu harness, and connected into that. There was of course the batt pos and neg connection, via the starter solenoid terminals.

---

Simplified 3.9 v8 loom - Modified Vehicle Builds & Special ...

It says 3.5v8 compatible but will be fine for all rover v8 capacities. This is an inline pump and needs to be mounted lower than the tank (efi pumps don't suck well). If your discovery has cats, you'll have to change the tune resistor, assuming your 110 doesn't run cats.

Serp 3.9efi disco engine into defender 110 V8 idiots guide ...  
However this time our 3.9 came from a 1998 discovery when we removed the engine along with the complete loom we found the main 7 pin connector to be a different colour then the normal white and it had 7 wires that are different from the diagrams ive used before. Hours of searching have been fruitless. My plug is as follows.

3.9 efi won't start - Discovery  
Forum - LR4x4 - The Land ...

If it was a 3.9 out of a range rover classic then yes its a easy conversion to do (i have just done it myself) as the efi wiring is seperate to the vehicle so can be transfered. my advice is to either get a RRC wiring harness and attach it to the disco engine or as many people on here will say

required amount of fuel. The air flow sensor employs a hot wire anemometer to sense air intake – and is consequently known as a hot wire system. Within certain limits, engine changes including displacement changes from 3.9 to 3.5 litre do not significantly alter the 14CUX's ability to correctly fuel the engine. Even aggressive
