A child has an innate (i.e. inborn) need to attach to one main attachment figure. This is called monotropy. This concept of monotropy suggests that there is one relationship which is more important than all the rest. Bowlby's suggests that there is a critical period for developing at attachment (2.5 years).

~~John Bowlby | Maternal Deprivation Theory | Simply Psychology~~

When parents provide a secure emotional base, encouraging their children to seek autonomy while giving them support and encouragement, children grow up psychologically stable and able to make the most of life's opportunities.

~~Secure Base A - Out Of Print, Consortium case studies ...~~

Secure attachment is formed when parents are available, responsive, and helpful to their kids when they are frightened or having trouble. The second form of attachment is "anxious resistant", which occurs when parents may or may not be available to their kids. Anxious resistant kids have separation anxiety, they are clingy, and they are anxious.
