\*\*This is the chapter slice "The Future of Space Exploration" from the full lesson plan "Space Travel & Technology"\*\* Create a Vision of Tomorrow with your students today as they imagine being part of the crew of a shuttle mission to the International Space Station. Your students will become the scientists, engineers, astronauts and leaders who will continue the Vision for Space Exploration as it carries humanity back to the moon, then on to Mars and beyond. Today's teachers play an important role in preparing students for that journey. Our resource provides ready-to-use information and activities for remedial students using simplified language and vocabulary. Science concepts are presented in a way that makes them more accessible to students and easier to understand. Comprised of reading passages, student activities, test prep, and color mini posters, our resource can be used effectively for whole-class. All of our content is aligned to your State Standards and are written to Bloom's Taxonomy and STEM initiatives.

Reproducible student activities cover early Native American settlements, African and western European influences, and Spanish and Portugese exploration.

What student-or teacher-can resist the chance to experiment with Rocket Launchers, Drinking Birds, Dropper Poppers, Boomwhackers, Flying Pigs, and more? The 54 experiments in Using Physics Gadgets and Gizmos, Grades 9-12, encourage your high school students to explore a variety of phenomena involved with pressure and force, thermodynamics, energy, light and color, resonance, buoyancy, two-dimensional motion, angular momentum, magnetism, and electromagnetic induction. The authors say there are three good reasons to buy this book: 1. To improve your students' thinking skills and problem-solving abilities 2. To acquire easy-to-perform experiments that engage students in the topic 3. To make your physics lessons waaaaay more cool The phenomenon-based learning (PBL) approach used by the authors-two Finnish teachers and a U.S. professor-is as educational as the experiments are attention-grabbing. Instead of putting the theory before the application, PBL encourages students to first experience how the gadgets work and then grow curious enough to find out why. Students engage in the activities not as a task to be completed but as exploration and discovery. The idea is to help your students go beyond simply memorizing physics facts. Using Physics Gadgets and Gizmos can help them learn broader concepts, useful critical-thinking skills, and science and engineering practices (as defined by the Next Generation Science Standards). And-thanks to those Boomwhackers and Flying Pigs-both your students and you will have some serious fun. Students will gain a solid overview of Old World history as they study this text. The book opens with the collapse of the Roman Empire and the rise of Christianity in Europe. It then covers the Dark Ages, the Renaissance, the Reformation, and the early era of exploration. Readers discover why so many of the religious beliefs and cultural values of Medieval Europe were later transplanted in the Americas. Includes chapter questions, vocabulary drills, and maps.

This fourth volume in the Current Perspectives on School/University/Community Research series brings together the perspectives of authors who are deeply committed to the integration of digital technology with teaching and learning. Authors were invited to discuss either a completed project, a work-in-progress, or a theoretical approach which aligned with one of the trends highlighted by the New Media Consortium's NMC/CoSN Horizon Report: 2017 K-12 Edition, or to consider how the confluence of interest and action (Thompson, Martinez, Clinton, & Diaz, 2017) among school-university-community collaborative partners in the digital technology in education space resulted in improved outcomes for all-where "all" is broadly conceived and consists of the primary beneficiaries (the students) as well as the providers of the educational opportunities and various subsets of the community in which the integrative endeavors are enacted. The chapters in this volume are grouped into four sections: Section 1 includes two chapters that focus on computational thinking/coding in the arts (music and visual arts); Section 2 includes three chapters that focus on the instructor in the classroom, preservice teacher preparation, and pedagogy; Section 3 includes four chapters that focus on building the academic proficiency of students; and Section 4 includes two chapters that focus on the design and benefits of school-university-community collaboration.
