Auditorium design guidelines "The design of various types of auditoriums (theatres, lecture halls, churches, concert halls, opera houses, and cinemas) has become a complex problem in contemporary architectural practice because, in addition to aesthetic, functional, technical, artistic and economical requirements, an auditorium often has to accommodate an unprecedented large audience."

Auditorium Design Guidelines - auditorium design plan PDF ...

Special Acoustical Design: Quality acoustical characteristics are important in Auditorium spaces so that performances and presentations can be clearly heard and understood. For performance spaces and general presentation spaces, recommended noise criteria (NC) rating ranges from NC-20 to NC-30; recommended sound transmission class (STC) rating ranges from STC 40 to STC 50.

arrangement—the auditorium and stage occupy two separate “boxes” or rooms. The stage box (stagehouse) provides fly space and wings and permits a wide variety of scenic and lighting effects. The auditorium box is the audience chamber, which may take many forms— fan-shaped, courtyard, lyric, etc.

Types & Forms of Theatres - Theatre Projects

We often expect a good acoustic auditorium environment would go into room and building design process. The fact is that most architects and designers under-emphasize acoustics, either through lack of acoustical training or because the client wants the best looking and most functional space at the lowest cost.

Soundproofing & Acoustics for Auditoriums | Audimute

The goal of the design guidelines is to improve the overall aesthetic character and visual unity of the Amherst campus as a whole. Each new building project will contribute to this goal through an integrated design approach that creates a desirable sense of place and reflects the appropriate scale, image, functionality and integration of building and open space. These design guidelines
