The oldest of these form the Dinantian series and consist of basal conglomerates, which may be found in the far north east of the county, just outside the Forest of Bowland. These underlay carboniferous "Great Scar" limestones which were deposited in shallow tropical seas in the northern most parts of the Forest of Bowland, whilst inter-bedded limestones,

sandstones, calcareous shales and reef forming limestones were deposited during the same period of time in layers further south ...

## ~~Geology of the Forest of Bowland | Forest of Bowland AONB~~

The Forest of Bowland, also known as the Bowland Fells, is an area of gritstone fells, deep valleys and peat moorland, mostly in north-east Lancashire, England with a small part in North Yorkshire. It is a western outlier of the Pennines. The Forest of Bowland was designated an Area of Outstanding Natural Beauty in 1964. The AONB also includes a detached part known as the Forest of Pendle separated from the main part by the Ribble Valley, and anciently a forest with its own separate history. One

The Bowland Fringe and Pendle Hill National Character Area (NCA) is a transitional landscape that wraps around the dramatic upland core of the Bowland Fells, underpinned by Carboniferous geology. Over half of this NCA, along with the Bowland Fells, makes up the Forest of Bowland Area of Outstanding Natural Beauty. This is a diverse landscape of herb-rich hay meadows – several of which are nationally and
