Through an effective blend of analysis and examples this text integrates the game theory revolution with the traditional understanding of imperfectly competitive markets. The book's focus is on strategic competition and how firms can shelter their market power and economic profits from competitors. This focus establishes the intellectual foundation for determining business practices that warrant antitrust examination and prohibition and underlines recent activist antitrust policy. The author's stress an integrated understanding of industrial organization and the development of students' analytical abilities.

著者译名:丘奇,

Continues to be the best introduction available to industrial organization and its importance to the economic wellbeing of a country.

This textbook presents 122 exercises on industrial organization with detailed answer keys. While most textbooks on industrial organization focus on theory and empirical findings, this textbook offers practical examples and exercises helping predict firm behaviour in different industries. The book emphasizes the game-theoretic tools used in each type of exercise, so students can systematically apply them to other markets, forms of competition, or information environments where firms, consumers, and regulating agencies interact. The book begins with examples that analyse different models of firm behavior and interaction; starting with monopoly and moving through the Cournot model of simultaneous quantity competition, the Bertrand model simultaneous price competition, and sequential competition. The following chapters apply game-theoretic tools to situations of increasing complexity: regulation; R&D incentives; mergers and collusion; bundling incentives; incomplete information, signalling, and competition; networks and switching costs. In addition to providing algebraic simplifications, some chapters also offer the unique feature of worked exercises based on published journal articles by leading scholars in the field. Finally, exercises are ranked according to their difficulty, with a letter (A-C) next to the exercise number, which allows students to pace their studies and instructors to structure their classes accordingly. Providing a rigorous, yet practical introduction to the field of industrial organization, this textbook is appropriate for advanced undergraduate and graduate students in economics and finance.

Industrial Organization: Markets and Strategies provides an up-to-date account of modern industrial organization that blends theory with real-world applications. Written in a clear and accessible style, it acquaints the reader with the most important models for understanding strategies chosen by firms with market power and shows how such firms adapt to different market environments. It covers a wide range of topics including recent developments on product bundling, branding strategies, restrictions in vertical supply relationships, intellectual property protection, and two-sided markets, to name just a few. Models are presented in detail and the main results are summarized as lessons. Formal theory is complemented throughout by real-world cases that show students how it applies to actual organizational settings. The book is accompanied by a website containing a number of additional resources for lecturers and students, including exercises, answers to review questions, case material and slides.

This book uses game theory to analyse anti-competitive behaviour among firms and to consider its implications for competition policy. Part I focuses on 'explicit collusion': the author proves that 'four are few and six are many', and shows how cartels can be enforced under imperfect and incomplete information. Part II on 'tacit collusion' discusses the informational requirements of collusion detection in noncooperative repeated games. In Part III on 'semicollusion', excess capacity is shown to reinforce collusion. Part IV is devoted to the detection of predatory pricing. In this book, Louis Philips applies the latest economic theory to a discussion of several European antitrust decisions and empirical studies. The presentation of case studies, combined with a clear exposition of the theory, will make this book invaluable to teachers and students of competition policy.

Using state-of-the-art empirical techniques, contributors address the policy challenges raised by globalization, the internet and other technological advances, innovation, and the rise of security measures in response to the 9/11 terrorist attacks. Chapters are organized around five themes: recent developments and policy challenges, Canadian firms in the information age, research and development and innovation, regulation and industrial performance, and securing trade and investment opportunities. The only substantive research volume on this subject in two decades, Industrial Organization in Canada is a welcome resource for policy makers, researchers, and academics concerned with industrial policy issues in contemporary Canada. Contributors include Ajay Agrawal (University of Toronto), Doug Allen (Simon Fraser University), Werner Antweiler (University of British Columbia), John Baldwin (Statistics Canada), Zhiqi Chen (Carleton University), Jean-Étienne de Bettignies (Queen's University), Marc Duhamel (Industry Canada), James Gaisford (University of Calgary), Avi Goldfarb (University of Toronto), Wulong Gu (Statistics Canada), Kathryn Harrison (University of British Columbia), Patrick Joly (Industry Canada), William Kerr (University of Saskatchewan), Kevin Koch (PricewaterhouseCoopers), Donald G. McFetridge (Carleton University), Peter W. B. Phillips (University of Saskatchewan), Mohammed Rafiquzzaman (Industry Canada), Sheshwar Rao (Institute for Research on Public Policy), Thomas W. Ross (University of British Columbia), Camille Ryan (University of Saskatchewan), Michel Sabbagh (Industry Canada), Guofu Tan (University of Southern California), Henry Thille (Guelph University), Johannes Van Biesebroeck (K.U. Leuven, Belgium), and Lasheng Yuan (University of Calgary).
