It's a great pleasure in presenting this fifth thoroughly revised edition of the book on Computer Applications in Business .In this revised edition,the book includes Operating System,E-Commerce & Internet,System Analysis & Design,Computer based Information System and Database.

This text shows students the usefulness of statistics in the context of real-business problems. Because the book combines an intuitive presentation with numerous pedagogical features, students quickly realize the power of statistics without getting lost in the theory. An early introduction to regression has been highly praised for its motivation. Shiffler and Adams have written an easy-to-read, well-motivated and useful text for business students.

This book is a comprehensive & authentic book on 'Computer Applications in Business'. The objective of the book is to impart computer skills and knowledge to commerce students and to enhance their understanding of information technology tools in handling the business operations. What sets this book apart is the simple presentation and step-wise explanation that ensures students without having any prior computer literacy can also learn computing and its business applications on their own. This book aims to fulfill the requirement of students of undergraduate courses in commerce and management, particularly the following: • B.Com. (H) Paper BCH 4.3 Core under Choice Based Credit System (CBCS) Programme of University of Delhi • B.Com. (Pass) Semester III of University of Delhi • CBCS Pan-India • Non-Collegiate Women's Education Board • School of Open Learning of University of Delhi • Various Central Universities throughout India The Present Publication is the 6th Edition, authored by Hem Chand Jain & H.N. Tiwari, with the following noteworthy features: • The subject-matter is presented in a simple, systematic method along with comprehensive explanation of the concept and theories underlying computer application in business. • [Student-Oriented Book] This book has been developed, keeping in mind the following factors: o Interaction of the author/teacher with his/her students in the class-room o Shaped by the author/teachers experience of teaching the subject-matter at different levels o Reaction and responses of students have also been incorporated at different places in the book • [Theoretical & Practical Aspects] This book covers both theoretical & practical applications. E.g., separate chapter has been added to illustrate how excel is useful in business decision making and data handling • [Basic Internet Terminologies/Recent Trends in Computing] Basic Internet Terminologies equips the students with commonly used terms while accessing internet, whereas Recent Trends in Computing has been added with an objective to keep students updated with recent technological developments in the fast changing digital space. • Thoroughly revised chapter on 'Decision Making with Excel' • Separate chapter on Database Management Systems using MS Access 2010 • Question appeared in Latest Question Paper of Delhi University have been incorporated at appropriate places o B.Com. (Hons.)/SEM. IV-2017 o B.Com. (Hons.)/SEM. IV-2018 o B.Com. (Hons.)/SEM. IV-2019 • Contents of this book are as follows: o Basic Computer Concepts and Networking o Basic Internet Terminologies o Recent Trends in Computing o Microsoft Word 2010 o Basics of PowerPoint o MS Excel 2010 o Excel Functions o Decision Making with Excel o Excel Projects o Introduction to Database System o Managing Databases using MS Access o Mail Merge

1. Word Processing, 2. Preparing Presentations, 3. Spreadsheet and its Business Applications, 4. Creating Business, 5. Database Management System, Appendix Multiple Choice Questions

1. Word Processing, 2. Preparing Presentations, 3. Spreadsheet and its Business Applications, 4. Creating Business Appendix

Regression analysis is arguably the single most powerful and widely applicable tool in any effective examination of common business issues. Every day, decision-makers face problems that require constructive actions with significant consequences, and regression procedures can prove a meaningful and valuable asset in the decision-making process. This text is designed to help students achieve a full understanding of regression and the many ways it can be used. Taking into consideration current statistical technology, Introductory Regression Analysis focuses on the use and interpretation of software, while also demonstrating the logic, reasoning, and calculations that lie behind any statistical analysis. Furthermore, the text emphasizes the application of regression tools to real-life business concerns. This multilayered, yet pragmatic approach fully equips students to derive the benefit and meaning of a regression analysis. This text is designed to serve in a second undergraduate course in statistics, focusing on regression and its component features. The material presented in this text will build from a foundation of the principles of data analysis. Although previous exposure to statistical concepts would prove helpful, all the material needed for an examination of regression analysis is presented here in a clear and complete form.

Statistics for Business with Computer Applications is a streamlined, easy to follow text. In each chapter, the authors relate new statistical concepts to previous ones, thus effectively building knowledge and a global understanding of new material. By presenting statistical theory first and then discussing computer applications using Microsoft Excel and Minitab, it presents a balance of theory and practical applications. The authors have written this book by carefully following a traditional sequence, starting with descriptive statistics and ending with quality control. Each chapter begins with statistical theory and then work toward business applications.
