Data

across networks.

Different types are :

1. Circuit Switching:

In the Circuit

Switching technique,

first, the complete

end-to-end

transmission path

between the source

and the destination

computers is

established and then

the message is

transmitted through

Access Free

Data

the path. The main advantage of this technique is guaranteed delivery of the message.

~~Data Communication
and Networking
Short Notes -1-
EXAMRADAR~~

Data communications (DC) is the process of using computing and communication

Access Free Data

technologies to transfer data from one place to another, or between participating parties. DC enables the movement of electronic or digital data between two or more network nodes, regardless of geographical location, technological medium or data contents.
