Answer: Surveying Problems - 24HourAnswers

Problem The tide in Bay of Fundy rises and falls every 13 hours. The depth of the water at a certain point in the bay is modeled by a function $d = 5 \sin (2\pi /13)t + 9$, where t is time in hours and d is depth in meters. Find the depth at $t = 13/4$ (high tide) and $t = 39/4$ (low tide).. The depth of the high tide is 15 meters and the depth of the low tide is 3 meters.
