Epidemiology of Basil Downy Mildew.

Along with the increase in commercial and home production, the spread of a disease called basil downy mildew has become a major concern. Basil downy mildew is caused by *Peronospora belbahrii* and can lead to 100 percent crop loss. This disease has spread to about 40 states since first being reported in South Florida in 2007. In Texas, basil downy mildew was first reported in 2010. Many herb growers are unaware of the disease and are not taking measures to protect their plants.

Basil Downy Mildew - What are symptoms of basil downy mildew?

First observations of basil and cucumber downy mildews at LIHREC. Onset of downy mildew development at LIHREC is very regular, with first symptoms found between 4 and 19 August since 2009; in contrast, first symptoms of downy mildew were found in cucumber from 17 July to 7 September over the years.

Basil Downy Mildew - Cornell University

Downy mildew has been reported to also infect several species of the Lamiaceae family including sage, coleus, and basil (Choi et al., 2009; Thines et al., 2009). Rapid sporulation and dissemination of the pathogen can be observed during periods of high humidity, mild temperatures, poor air circulation, and duration of leaf wetness ( Garibaldi et al., 2005 , 2007 ).

Rapid staining method to detect and identify downy mildew ...

Over the past two decades several downy mildew diseases in medicinal and spice plants have been newly reported and led to economic losses, for example *Peronospora somniferi* on opium poppy (*Papaver somniferum*)(Voglmayretal.2014), *P. belbahrii* on basil (*Ocimum basilicum*) (Thines et al. 2009), and *P. salviae-officinalis* on common sage (Choi et al. 2009).

Epidemiology of sage downy mildew, *Peronospora salviae* ...

Downy Mildew The basil Downy Mildew is a fungus type disease and is usually caused by a pathogen known as *Peronospora belbahrii*. It is introduced mainly through disease borne seeds, infected leaf parts, wind-dispersed spores from another infected basil plant.

Occurrence, Symptoms, and Description of Common Basil Diseases

Both downy mildew and anthracnose appear to be largely affected by humid conditions and free moisture in the form of dew or rain are necessary for infection and rainy conditions lead to their epidemic build up. On the contrary, powdery mildew requires relatively dry conditions and moderate temperature.
