About one-third of M&A volume announced in Q2 came from technology, media, and telecoms deals, including the mammoth WarnerMedia and Discovery tie ... of some branches, et cetera.

"Love drives and gives life to the commerce of mankind." Thus, the sixteen year old Ferdinando Galiani (1728-1787) presented his project to understand the sociable nature of man. This observation, a reflection of his own position on the relation between trade and virtue, hinted at what the mature works of Galiani, one of the most noteworthy economists and wits in eighteenth-century Italy, would eventually yield. In Love, Self-Deceit, and Money, Koen Stapelbroek reconstructs the Early Neapolitan Enlightenment debate on the morality of market societies, a debate that hinged on the preservation of Naples' independent statehood in a global arena of commercial and military competition. Galiani rejected the moralizing and mercantile ideas of his contemporaries regarding the dangers threatening Naples, and, in his Della moneta (1751), he justified the systems set in place by the Neapolitan government. With reference to early, previously unstudied lectures on self-deceptive 'Platonic love,' Koen Stapelbroek examines Galiani's role in the wider debate, arguing that his early moral philosophical and historical work suggests a great deal about his political-economic stance, including his assertion that money is the ultimate ordering principle in the universe. As a study of one of the most idiosyncratic minds of the Enlightenment period, Love, Self-Deceit, and Money shows how diverse ideas of the development of individual passions into social dispositions, commerce, and reform politics dovetailed seamlessly in the intellectual climate of eighteenth-century Europe.

Interest in oceanography and marine biology and its relevance to global environmental issues continues to increase, creating a demand for authoritative reviews that summarize recent research. Oceanography and Marine Biology: An Annual Review has catered to this demand since its foundation, by the late Harold Barnes, more than 40 years ago. It is an

This book bridges the gap between models of human behavior that are based on cognitive task analysis and those based on neural networks. The author argues that these approaches are incomplete and not properly related to each other. His synthesis reconciles the very different conceptualizations of human memory assumed by these two approaches by assuming that 'what the brain remembers' is not a collection of symbols or neurons or even networks of either of these, but rather how to coordinate behavior in time, relating different modalities of conception and movement. A second premise is that behavior sequences are categorized, with perceptual categorizations (sounds, images) comprising the first order of categorization and conceptual categorizations of perceptions and actions in time comprising the second order. The conceptual categorizations are themselves sequenced and categorized, corresponding to the familiar classification hierarchies in cognitive models. Inspired by Bartlett's work, the author seeks to develop a theory of "process memory"--memory for experience in time. Following the methodology of situated cognition, he finds clues in the particulars of human activity, such as typing errors, how a computer interface is used, how a child learns to play in a swimming pool, odd limitations in language comprehension, and so on. Throughout, he examines existing (and often famous) cognitive and neural models with respect to these phenomena. In each case, he attempts to show that the experienced behavior can be understood as sequences of categories being reactivated, substituted, and composed. Ultimately, this analysis is shown to be the link that may lead to improvement of both symbolic and neurally based models of memory and behavior, with concomitant implications for cognitive psychology, artificial intelligence, and cognitive science as a whole.

Written in an age of revolutions, Lyrical Ballads represents a radical new way of thinking - not only about literature but also about our fundamental perceptions of the world. The poetry of Wordsworth and Coleridge continues to be among the most appealing and challenging in the rich tradition of English Literature; and Lyrical Ballads, composed at the height of the young authors' creative powers, is now widely acclaimed as a landmark in literary history. In this lively study, detailed analysis of individual poems is closely grounded in the literary, political and historical contexts in which Lyrical Ballads was first conceived, realised and subsequently expanded into two volumes. John Blades examines poetry from both volumes and carefully reassesses the poems in the light of Wordsworth's and Coleridge's revolutionary theories, while Part II of the study broadens the discussion by tracing the critical history of Lyrical Ballads over the two centuries since its first publication. Providing students with the critical and analytical skills with which to approach the poems, and offering guidance on further study, this stimulating book is essential reading.

This is the first authoritative edition of one of the most significant children's books of the twentieth century. Winner of the 1961 Newbery Medal, 'Island of the Blue Dolphins' tells the story of a girl left alone for eighteen years in the aftermath of violent encounters with Europeans on her home island off the coast of Southern California. This special edition includes two excised chapters, published here for the first time, as well as a critical introduction and essays that offer new background on the archaeological, legal, and colonial histories of Native peoples in California. 'Sara L. Schwebel explores the composition history and editorial decisions made by author Scott O'Dell that ensured the success of 'Island of the Blue Dolphins' at a time when second-wave feminism, the civil rights movement, and multicultural education increasingly influenced which books were taught. This edition also considers how readers might approach the book today, when new archaeological evidence is emerging about the 'Lone Woman of San Nicolas Island,' on whom O'Dell's story is based, and Native peoples are engaged in the reclamation of indigenous histories and ongoing struggles for political sovereignty.

Includes summaries of proceedings and addresses of annual meetings of various gas associations.
