This book for architects, interior designers, building managers, students, conference organisers looks at first principles to provide the user with the 'tools' to make their own decisions rather than a 'cookbook' approach. It is intended that designs and product information can be taken straight from the manual and inserted into ongoing projects. For the first time the book considers the needs of people with visual, hearing and mental disabilities, who make up the majority of disabled people in the population,

alongside those of people with physical mobility disabilities. Practical low cost solutions to retro-fitting existing buildings are discussed, as well as the methods used to assess the suitability of an existing building, and assembling a project to improve access for disabled people. Specific products and designs are illustrated and discussed - with full working technical drawings, and full specification details. These will reduce considerably the research time needed to produce a cost-effective solution that will improve access for disabled people. A perspective of the standards and legislation dealing with access issues in the UK is compared with those in other countries, and the

standards mentioned are compared with the realities of practical implementation carried out in 4 years of design in this area.

This extensively revised and updated fourth edition provides engineers with the principles and tools needed to turn their familiarity with earlier ACI Codes into more profitable, time-saving routine designs. Created to be used with the ACI Code and Commentary, this outstanding guide follows the new Code format with information covered in more specific sections and subsections in order to enhance clarity. In addition, it shortens the time needed for computer-aided design and analysis, converts

code formulas from the review form to direct design, and presents simple formulas, tabulations, and charts for conservative longhand direct design. Two convenient indices - a subject index and a 1995 Code section index - are provided, enabling engineers to quickly locate all Code references to a particular topic, as well as concise interpretation of a given Code section. The Guide also saves engineers time and effort on the job with its detailed coverage of: torsional stiffness, braced and unbraced slender columns with and without sidesway, wide-module joist systems, reinforcement details for economy in design, detailing, fabricating, field erection, and

inspection, latest ASTM material specifications, anchorage, development, and splice requirements, high-strength concrete, comparisons between wall and column economy, structural plain concrete. More than ever, the sure-handed Structural Design Guide to the ACI Building Code is an indispensable practical reference for structural, civil, and architectural engineers and students who want to safely meet modern building requirements while taking full advantage of every economy permitted by the 1995 ACI Code.

This two-volume set CCIS 173 and CCIS 174 constitutes the extended abstracts of the posters presented during the 14th

International Conference on Human-Computer Interaction, HCII 2011, held in Orlando, FL, USA in July 2011, jointly with 12 other thematically similar conferences. A total of 4039 contributions was submitted to HCII 2011, of which 232 poster papers were carefully reviewed and selected for presentation as extended abstracts in the two volumes.
