Game theory isn't the study of how to win a game of chess or how to create a role-playing game scenario. Often, game theory doesn't even remotely relate to what you'd commonly consider to be a game. At its most basic level, game theory is the study of how people, companies or nations (referred to as agents or players) determine strategies in different situations in the face of competing strategies acted out by other agents or players. Game theory assumes that agents make rational decisions ...
