The AIDS epidemic, caused by HIV, found its way to the United States as early as 1960, but was first noticed after doctors discovered clusters of Kaposi's sarcoma and pneumocystis pneumonia in gay men in Los Angeles, New York City, and San Francisco in 1981. Treatment of HIV/AIDS is primarily via a "drug cocktail" of antiretroviral drugs, and education programs to help people avoid infection. Initially, infected foreign nationals were turned back at the U.S. border to help prevent additional inf

Hiv aids In Us Communities Of Color

Every community needs a program that can identify children affected by HIV/AIDS - those who are living with parents who are ill, those whose parents have already died, and children who have HIV/AIDS themselves. These are some of the things that can be done:

Introduction to community action on HIV/AIDS

According to UNAIDS, the United States (U.S.) has a concentrated HIV epidemic, primarily among men who have sex with men (MSM) and injection drug users (IDUs). 1,2 While the HIV epidemic has not had a broad impact on the general U.S. population, it has greatly affected the economically disadvantaged in many urban areas. We sought to characterize the HIV epidemic in impoverished urban areas of the U.S. and determine whether the epidemic in these areas meets the UNAIDS definition of a ...
