Utility E.ON will convert a natural gas pipeline in Germany that is part of the public supply system to carry 100% hydrogen to test whether gas pipelines are technically able to transport pure H₂. A technical standard in Germany currently limits the hydrogen concentration in natural gas networks to a maximum of 10%, but a number of trials have already explored higher admixture rates, E.ON said.

This text explains the how's and why's of the pipeline industry. It was written for those not directly involved in pipeline operations - legal, supply, accounting, finance, and human resource specialists, and people who service and sell equipment to pipeline companies. But even engineers and expert pipeliners can gain insights from the book's depth and broad perspective.

"Christopher Castaneda's study of the construction of the pipelines that transported southwestern gas to the Northeast traces the ways in which the federal regulatory process fostered competitive growth in the natural gas industry." "In 1938, the Natural Gas Act granted the Federal Power Commission jurisdiction over the interstate transmission and sale of natural gas. The FPC used its new powers to guide, shape, and manage an intensely competitive period in the industry. As Castaneda shows, aggressive and politically astute entrepreneurs based in the Southwest took advantage of economic opportunity and a regulatory environment conducive to industry growth. They financed and built the nation's longest gas pipelines to connect the massive southwestern reserves with the major northern energy markets. The coal industry, which supplied the raw product for manufactured gas, and the railroad industry, which transported the coal, adamantly but unsuccessfully opposed the action and attempted to halt the introduction of natural gas into their northeastern markets. First, during the war years, emergency regulatory agencies directed the expansion of the industry into Appalachia. Then, in the ensuing peacetime, market forces prompted entrepreneurs to compete vigorously for regulatory approval to build pipelines to sell natural gas in the Northeast." "While previous studies have examined the development of the natural gas industry after 1954, when the Supreme Court's Phillips decision established the FPC as a regulator of price control rather than as a manager of industrial growth, Castaneda's is the first to examine this earlier entrepreneurial era. Based on exhaustive research in corporate records and government documents, Regulated Enterprise offers a case study of government-business relations during a period of rapid industrial expansion and suggests a new way of looking at federal regulation and competitive growth." --BOOK JACKET.Title Summary field provided by Blackwell North America, Inc.
