ITIL @ Asset and Configuration Management. IT services are typically made up of a bunch of individual components — things like servers, software and middleware, and unique configuration information. In ITIL v3, Service Asset and Configuration Management (SACM) is about properly planning and managing (and reporting and auditing) the relationships and attributes of all of these components, across every service in your infrastructure.

[ITIL@ Asset and Configuration Management — BMC Blogs](#)

ITIL defines Configuration Management as the management and traceability of every aspect of a con- figuration from beginning to end, a process that tracks all individual Configuration Items (CI) generated by applying all of the key process areas in a system.

Configuration Management within the ITIL framework Configuration Management is addressed in ITIL ' s Service Transition publication. The document describes Configuration Management as the process responsible for managing services and assets to support the other Service Management processes.

[Configuration Management within the ITIL framework](#)

There are seven processes involved in Service Transition: Change Management, Change Evaluation, Release and Deployment Management, Service Validation and Testing, Service Asset and Configuration Management, Knowledge Management, and Transition Planning and Support/Project Management.

[The Essential Guide to ITIL Framework and Processes](#)

Change Management in ITIL is a process designed to understand the risks involved and minimize them while making changes in the IT infrastructure. The Change management process is a sequence of activities that are followed by a change management team to use change management on a project to ensure that it meets the intended outcome.

[Introduction to ITIL Service Asset and Configuration...](#)

The primary objective of ITIL Service Asset and Configuration Management Process (ITIL SACM) is to identify, document and administrate all the Configuration Items (CIs) required for delivering IT services, including their relationships and dependencies. Other objectives of SACM (ITIL V3) are:

[ITIL Service Asset and Configuration Management | ITIL...](#)

Configuration management is one of the few processes that overarch all other process and service lifecycle phases in ITIL V3. Without it, the effectiveness of the rest of your processes will be in...

[ITIL: What goes in a Configuration Management Plan...](#)

ITIL is a framework providing best practice guidelines on all aspects of end to end service management. It covers a complete spectrum of people, processes, products and use of partners. Now a days, ITIL is being practiced by almost every company providing IT services to its customers. The processes, tasks and checklists described in ITIL are not organization-specific, but can be implemented by any organization.

[ITIL – Quick Guide – Tutorialspoint](#)

Configuration Management Description/Summary. In the Configuration Management all CIs according to a service will be processed. Configuration Management provides the data used by all other ITSM processes. The data is used for e.g.: Identify and progress incidents; Assess the impact of an incident; Identify faulty equipment

[Configuration Management | mITSM](#)

Configuration Management according to ITIL V3 introduces the Configuration Management System (CMS) as a logical data model, encompassing several Configuration Management Databases (CMDB). ITIL 2011 requires additional interfaces in Configuration Management, in line with the new structure of Service Transition processes. The process overview of ITIL Configuration Management (.JPG) shows the key information flows (see fig. 1).

[Service Asset and Configuration Management | IT Process Wiki](#)

Although Problem Management is its own process, it is dependent on an effective Incident Management process and the proper tools; tools that include a common interface, access to available knowledge, configuration management information and interaction with other related ITIL processes.
