Joint-Preserving Osteotomies for Malunited Foot & Ankle ...

Supramalleolar osteotomy is a joint-preserving surgical treatment for patients with asymmetric valgus or varus ankle arthritis. Studies showed that 50 per cent of all patients with ankle OA have malalignment [34,35]. Supramalleolar osteotomies are becoming an increasingly popular option for treatment of mild-to-moderate arthritis with deformity.

Prerequisites for successful reconstruction are intact cartilage, sufficient bone quality, residual joint function and good patient compliance. Since the works of B. G. Weber, joint-sparing osteotomy is an established treatment option for malunited malleolar fractures with reliable long-term results and low rates of complications and secondary fusions.

In case of development of subtalar arthritis a secondary in situ fusion of the subtalar joint can be performed on a corrected hindfoot with good prospects. CONCLUSION: In carefully selected cases of malunited intra-articular calcaneal fractures, joint-preserving osteotomy is an alternative to corrective subtalar fusion.

but are not limited to: Anatomy and Biomechanics of Cavovarus Deformity, Clinical Examination and Radiographic Assessment of the Cavus Foot, Neurologic Disorders and Cavovarus Deformity, Pediatric Cavovarus Deformity, Ligament Instability in Patients with Varus Deformity, Inframalleolar Varus Deformity, Arthrodesis of Varus Ankle, Total Replacement of Varus Ankle, both 2-Component and 3-Component Prosthesis Design, Avoiding Posttraumatic Varus Deformities, and Failure of Surgical Treatment in Patients with Cavovarus Deformity, among others.

Osteotomies in the treatment of degenerative and

Access Free Joint Preserving Osteotomies For Malunited Foot And Ankle Fractures An

posttraumatic arthritis seem to be a lost art. Even for young patients joint replacement is in vogue. An international group of renowned surgeons present an outstanding hands-on approach to perform correction osteotomies in posttraumatic deformities from the clavicle to the foot. Most of the content is based on case presentations and each case provides step-by-step description of case history, planning, surgical approach, osteotomy, fixation, rehabilitation, and finally pitfalls and pearls. Hundreds of full-color pictures, precise illustrations, and x-rays demonstrate the significant steps in deformity corrections. Long-term follow-ups demonstrate the efficacy of osteotomies in the treatment of malunions. In the

Access Free Joint Preserving Osteotomies For Malunited Foot And Ankle Fractures An

principle part preceding the case presentations relevant theoretical information on posttraumatic deformities and osteotomies, operative techniques, and fixation methods, as well as the formation of a surgical plan is provided. Overall the book features over 110 detailed case presentations. This book should convince surgeons to use osteotomies in the treatment of posttraumatic deformities and consider joint-preserving techniques in the treatment of posttraumatic osteoarthritis.

This issue of Foot and Ankle Clinics will focus on Injectable rh-PDGF in collagen carrier for hindfoot fusion; Vancouver experience of rh-PDGF; B2-A polypeptide in foot ankle fusion; Adipose-derived msc in hindfoot fusion; Polyvinyl for hallux rigidis; New development of novel hammer toe and mt plate; Large BM Intra articular allograft; and many other articles surrounding bone grafts, bone graft substitutes, and biologics.

The fourth volume of Progress in Orthopaedic Surgery is somewhat different from previous publications of

Access Free Joint Preserving Osteotomies For Malunited Foot And Ankle Fractures An

Issue Of Foot And Ankle Clinics Of North the series. The editors have again tried to present two topics but the publications presented from the European literature are of very recent origin. In the age of total joint replacement it was felt to be imperative to counteract the pre sent tendency to treat every joint which does not seem to be healthy with an artificial re placement. Orthopaedic surgery seems to be influenced by trends. In 1963, E. A. Nichol discussing intracapsular hip fractures, quoted from Alice In Wonderland in an editorial written for volume 45B of the Journal of Bone and Joint Surgery "The Queen had only one way of settling all difficulties, great or small, "Off with his head"!". Today one could paraphrase his implied criticism by saying

Access Free Joint Preserving Osteotomies For Malunited Foot And Ankle Fractures An Issue Of Foot And Ankle Clinics Of North

"Out with the joint". No one doubts that joint replacements have been of great value in treating degenerative joint changes, but it is already apparent that replacement operations are not the ultimate answer for treating every joint deformity. This volume represents the European experience of different types of surgery in treating arthrosis of the joints of the lower limb. A reader of the Anglo-American literature will find suggestions in it which reaffirm his uneasiness in considering only one solution for problems concerning lower limb joints. I feel strongly that there are other ways which allow a patient to function well with less extensive operations.

Written by leading surgeons with expertise in performing osteotomies around the knee, this book is an essential reference for the current techniques in joint-preserving knee surgery. The book opens with a thorough discussion of physiology, pathophysiology, clinical evaluation, and imaging. It then describes the indications and basic principles of treatment and provides a detailed planning algorithm for high-tibial osteotomy. Separate chapters cover various clinical applications, addressing important topics ranging from the effects of osteotomies on cartilage pressure in the knee to management for failed osteotomies around knee. The book also discusses the latest technological developments in the field, such as
