the derivative is a way to show rate ...

And "the derivative of" is commonly written
: x $2 = 2x$ "The derivative of x 2 equals $2x$" or
simply "d dx of x 2 equals $2x$" What does x 2
$= 2x$ mean? It means that, for the function x

2, the slope or "rate of change" at any point is $2x$. So when $x=2$ the slope is $2x = 4$, as shown here: Or when $x=5$ the slope is $2x = 10$, and so on.

Introduction to Derivatives - MATH

I'm moving on with high expectations to Math Shorts: Derivatives II. Read more.

One person found this helpful. Top critical review. See all 5 critical reviews › Walk and Talk Traveler. 3.0 out of 5 stars learning derivative is not easy even with a teacher. Reviewed in the United States on April 29, 2015.

Shorts - Derivatives

Important note: if you don't have prior
knowledge in integration (that includes anti-
derivatives of basic functions, substitution,
integration by parts), I strongly recommend
reading "Math Shorts - Integrals" before
moving on to this second installment "Math
Shorts: Integrals II".

Math Shorts - Integrals II eBook: Bektas;
Metin: Amazon ...

Example: Compute the derivative of the
function $\(f(x) = x^2\)$ at the point $\(x\_0 = 2\)$ Solution: We simply use the definition
and replace the corresponding terms. Let's
see what we get: $\[f'(2) = \lim\_{x\to 2}$

$\frac{x^2-2^2}{x-2} \]$ We simply replaced $\(f(x) = x^2\)$ and $\(x_0 = 2\)$ in the original definition of derivative.
