Apex Mathematics of Personal Finance Help?!? | Yahoo Answers

M.Sc. Financial Mathematics or Master of Science in Financial Mathematics is a postgraduate Finance course. Financial Mathematics is a field of applied mathematics, concerned with financial markets. The subject has a close relationship with the discipline of financial economics, which is concerned with much of the underlying theory.

A user-friendly presentation of the essential concepts and tools for calculating real costs and profits in personal finance Understanding the Mathematics of Personal Finance explains how mathematics, a simple calculator, and basic computer spreadsheets can be used to break down and understand even the most complex loan structures. In an easy-to-follow style, the book clearly explains the workings of basic financial calculations, captures the concepts behind loans and interest in a step-by-step manner, and details how these steps can be implemented for practical purposes. Rather than simply providing investment and borrowing strategies, the author successfully equips readers with the skills needed to make accurate and effective decisions in all aspects of personal finance ventures, including mortgages, annuities, life insurance, and credit card debt. The book begins with a primer on mathematics, covering the basics of arithmetic operations and notations, and proceeds to explore the concepts of interest, simple interest, and compound interest. Subsequent chapters illustrate the application of these concepts to common types of personal finance exchanges, including: Loan amortization and savings Mortgages, reverse mortgages, and viatical settlements Prepayment penalties Credit cards The book provides readers with the tools needed to calculate real costs and profits using various financial instruments. Mathematically inclined readers will enjoy the inclusion of mathematical derivations, but these sections are visually distinct from the text and can be skipped without

the loss of content or complete understanding of the material. In addition, references to online calculators and instructions for building the calculations involved in a spreadsheet are provided. Furthermore, a related Web site features additional problem sets, the spreadsheet calculators that are referenced and used throughout the book, and links to various other financial calculators. Understanding the Mathematics of Personal Finance is an excellent book for finance courses at the undergraduate level. It is also an essential reference for individuals who are interested in learning how to make effective financial decisions in their everyday lives.

Applied Mathematics for Personal Finance provides a general introduction to the ways that mathematics can be applied to personal financial decision-making. This book is suitable for college students with no previous background in economics or finance; only familiarity with high school algebra is assumed. This book demonstrates how you can utilize math skills you already know in application areas that may be unfamiliar; it also introduces some new math skills that you can apply to familiar problems. The book emphasizes the development and application of the economic life-cycle model as the framework for evaluating all of your personal financial decisions. Economists, including six Nobel Laureates, have spent close to a century developing the concept of life-cycle consumption smoothing. "Smoothing" refers to the need to spread your economic resources over your lifetime, taking into account that your future is highly uncertain.

Glencoe Mathematics for Business and Personal Finance: The Latest in Technology! Relevant - Convenient - Adaptable!

An assessment of Oregon personal finance teachers' beliefs and recommendations for secondary personal finance curriculum was the major purpose of this survey. A questionnaire based on the concepts and subconcepts in the Oregon Personal Finance Education Guide was used for data collection. All Oregon personal finance teachers who taught the personal finance requirement during 1975-1976 and 1976-1977 comprised the sample for this study. Four hundred questionnaires were sent and 182 questionnaires were returned, representing 45.5 percent of the population. The findings of this survey were based on these responses. Teachers responded from all school sizes and geographic areas of Oregon. The major disciplines represented were business education, home economics, mathematics, and social studies. Information received by the researcher was organized in three sections. In the first section, the best combination of the two semesters required for the personal finance course was identified. With a choice of grades nine through 12, any combination of semesters at grades 11 and 12 received the support of 72.8 percent of the teachers. In the second section, the five major concepts and 29 subconcepts of the Personal Finance Education Guide were discussed. More specifically, the researcher sought answers to the following questions: 1. What concepts and subconcepts are taught in the personal finance curriculum? 2. What concepts and subconcepts are needed in the personal finance curriculum? The five major concepts are: I. Employment and Income II. Money Management III. Credit IV. Purchase of Goods and Services V. Rights and Responsibilities in the Marketplace All major concepts were taught and perceived as needed by more than 85 percent of the personal finance teachers except Concept I, Employment and Income. Forty two percent of the respondents stated this concept was not taught, while 33 percent felt it was not needed. While these teachers saw a need for this information in the high school curriculum, they stated that it was or should be taught in the career education course. Comments concerning the concepts, the subconcepts, and the Guide as a whole were also included in this discussion. These remarks covered addition, deletions and organization of the material. The most requested addition was taxation, with 44 separate comments. Suggestions included federal, state, and local taxes; income, property, and inheritance taxes; appropriate methods of tax reporting; consequences of improper records; and uses of tax money at all levels. Fifty nine percent of the respondents requested a more definitive approach to Concept IV, Purchase of Goods and Services with specific units to include housing, transportation, and food. In section III of the survey the researcher hoped to find the most popular curriculum sequence for the two semester course. Only 62 percent of all respondents completed this section. Those teachers who did respond suggested Concept I, Employment and Income, and Concept II, Money Management, be taught in the first semester. Concept III, Credit, and Concept V, Rights and Responsibilities in the Marketplace, belonged in the second semester, with Concept IV, Purchase of Goods and Services, appropriate for either semester. Those teachers who did not respond to this section gave two explanations: 1. If both semesters of the personal finance requirement were taught in the same year, the curriculum sequence was unimportant. 2. Schools using the "unit topic" approach were able to separate concepts and subconcepts by semesters, but "process oriented" programs, where concepts and subconcepts overlapped, made semester divisions irrelevant. The Oregon Personal Finance Education Guide is scheduled for revision during 1978. The suggestions and recommendations of the secondary personal finance teachers, as presented in this survey, will be used in this revision.

This very practical series will help adolescents and adults alike to understand mathematics as it relates to their everyday lives. Each book covers basic math concepts and skills before exploring the more specific topics. Clear explanations are followed by ample practice. Each section also has a pretest, a section review, and posttest.

Revised edition of author's Personal financial literacy, copyrighted 2010.

Today's graduates should be grounded in the basics of personal finance and possess the skills and knowledge necessary to make informed decisions and take responsibility for their own financial well-being. Faced with an array of complex financial services and sophisticated products, many graduates lack the knowledge and skills to make rational, informed decisions on the use of their money and planning for future events, such as retirement. This book shows what you can do to improve financial literacy awareness and education. It covers the use of interactive games and tutorials, peer-to-peer mentoring, and financial literacy contests in addition to more formal education. It gives you a sample of approaches and experiences in the financial literacy arena. Divided into three parts, the book covers financial literacy education for grades K-12, college, and post-college.

The most trustworthy source of information available today on savings and investments, taxes, money management, home ownership and many other personal finance topics.
