This updated edition of Transport Law in Australia describes the main sources of transport law, jurisdiction and courts, state immunity, and the legal role of transport intermediaries. The scope of the book is broad in that it encompasses maritime, road, rail, air, and multimodal transport law. Almost half the book is devoted to maritime and shipping law which, for an island nation with over 95% of its international trade carried by sea, is as important as it is unsurprising. Whilst works of this nature have the potential to be a 'dry' read, in this case the author has taken an approach which makes the book eminently readable and usable. The text is well supported by in-depth research and enhanced with comprehensive referencing, footnotes, tables of cases and statutes, as well as a selected bibliography. With Australian society and the economy vitally dependent on all modes of transport this book will be a valuable addition for many in the transport community. This includes transport operators, shippers and freight forwarders, transport regulators and lawyers, as well as academics, researchers and students engaged in the study of transport. The author's practical and masterful approach to the subject should go a long way to ensuring the success of Transport Law in Australia as well as being a valuable addition to the body of literature on this important topic. Barrie Lewarn Professor Australian Maritime College, National Centre for Ports and Shipping University of Tasmania Review of the second edition of Transport Law in Australia.

This book examines how the 19th century's transport legacy of bicycles, trains, ocean-going steamers, trucks, trams, buses and cars arose, creating numerous new technologies and markets. Nothing like this range of transport changes had occurred before, and the 20th century changes were incremental compared with those of the 19th century. The book explores where the key transport features came from, and why there were so many inventions, innovations, and inconsistencies. The Industrial Revolution was a key part of the process as it had strong links with transport developments. This text adopts a broad, global perspective, but has a strong British orientation, as the Industrial Revolution was a process predominantly initiated and implemented in Britain. Nevertheless, when the Revolution lost momentum, Britain began to lose its leadership. By century's end, France and south-western Germany were dominant change-makers and the USA was appearing on the horizon. The book also highlights the many individual inventors and entrepreneurs who caused the dramatic transport changes, and notes that they did this predominantly through individual initiatives to satisfy personal, rather than corporate or national, goals and that they were often hindered, rather than aided, by officialdom.

Bills of Lading: Law and Contracts provides a detailed legal analysis of common standard form clauses in bills of lading (and waybills) which are in use in the maritime world, as well as a comprehensive examination of the legal principles which are applicable to them. Bills of Lading: Law and Contracts provides a detailed legal analysis of standard form clauses in bills of lading (and waybills) which are in use in the maritime world, as well as a comprehensive examination of the legal principles which are applicable to them.
