A molar solution is defined as an aqueous solution that contains 1 mole (gram-molecular weight) of a compound dissolved in 1 liter of a solution. In other words, the solution has a concentration of 1 mol/L or a molarity of 1 (1M). Physicists and chemists typically use this parameter to express concentrations of various substances.

Molar refers to the unit of concentration molarity, which is equal to the number of moles per liter of a solution. In chemistry, the term most often refers to molar concentration of a solute in a solution. Molar concentration has the units mol/L or M.

Molar Definition in Chemistry (Unit)  
One molar is the molarity of a solution where one gram of solute is dissolved in a litre of solution. Molarity Formula is the total number of moles of solute per litre of solution. It is dependent on the changes in physical properties of the system like pressure and temperature.

Molarity - Formula, Definition, Examples, Molar concentration  
A molar Solution refers to a solution with Molarity=1. A molar solution is a solution which contains 1 mole or 1 Gram Molecular Weight of the Solute dissolved in a particular solvent and then made up to 1000 ml with the same solvent. Molarity of a solution can be calculated by using s simple formula. M= (w2/m2) x (1000/V) where

What is a molar solution? - Quora  
Molar solutions use the gram molecular weight of a solute in calculating molar concentration in a liter (L) of solution. The gram molecular weight (GMW) of a substance (sometimes called the "formula weight") is the sum of the combined atomic weights of all atoms in the molecule expressed in grams.

A molal solution is a solution that contains 1 molecular weight of solute in a kilogram of solvent. It is the strength or concentration of a solution, especially the amount of dissolved substance in a given volume of solvent. It is a concentration of a solution expressed in moles or molality (m).

What is a Molal Solution? - Definition from Corrosionpedia  
molarity of solution = mol KC/L water molality = 0.0161 mol KCl/0.25 L water molarity of the solution = 0.0644 M (calculator) Since you were given mass and volume using 2 significant figures , you should report molarity in 2 sig figs also:

Molarity Definition as Used in Chemistry  
Molar concentration (also called molarity, amount concentration or substance concentration) is a measure of the concentration of a chemical species, in particular of a solute in a solution, in terms of amount of substance per unit volume of solution. In chemistry, the most commonly used unit for molarity is the number of moles per liter, having the unit symbol mol/L or mol dm<sup>-3</sup> in SI unit.

Molar concentration - Wikipedia  
Molarity: Measure of: concentration Definition: the moles of solute in a solution divided by the liters of solution Equation: M = moles of solute/liters of solute Ration of moles to: mass (in liters) Example: 6.0 M HCl is a solution of HCl in molarity. Interesting fact: molarity is depends on the variation of the volume of the solution due to thermal expansion.

D8.docx - Molarity Measure of concentration Definition the ...  
Molar solutions contain one mole of solute in one litre of solution. This means these solutions contain one mole of a substance dissolved per litre of solution. Therefore, the molar concentration of the solution is always 1M.

Difference Between Molar Solution and Normal Solution ...  
1. a homogeneous mixture of one or more substances (solutes) dispersed molecularly in a sufficient quantity of dissolving medium (solvent). 2. in pharmacology, a liquid preparation of one or more soluble chemical substances, which are usually dissolved in water. For names of specific solutions, see under the name.

Molarity, which is denoted by M, is defined as the number of moles of solute present in one litre of solution. It is given by the equation: molarity = no. of moles of solute/volume of solution in litres

Molarity – Definition, Mole Fraction and Weight Percentage  
Definition: Molarity of a given solution is defined as the total number of moles of solute per litre of solution. The molality of a solution is dependent on the changes in physical properties of the system such as pressure and temperature as unlike mass, the volume of the system changes with the change in physical conditions of the system.
