Let C be a relation on a set A . If $A_0 \subseteq A$, define the restriction of C to A_0 to be the relation $C \cap (A_0 \times A_0)$. Show that the restriction of an equivalence relation is an equivalence relation. Solution: Let C_0 be the restriction of C to A_0 . As an initial matter, clearly if $(a, b) \in C_0$, then $(a, b) \in C$. Further, if

Munkres - Topology - Chapter 2 Solutions

Solution: Given $x, y \in X$ $[0; 1)$ where $x < y$, we have $x = x \cup x \cup 1$ and $y = y \cup y \cup 1$.

Since $[0; 1)$ is a linear continuum, if $x \cup y \cup 1 < y \cup 1$, let $z \cup 1 \cup 2(x \cup 1; 1)$; if $x \cup y \cup 1 = y \cup 1$, let $z \cup 1 \cup 2(x \cup 1; y \cup 1)$. Hence if $z = x \cup y \cup 1$, then $x < z < y$. Now let U be a non-empty
