Get Free Nonfermentative Gram

Pink-pigmented non-fermentative gram-negative rods associated with human infections: a clinical and diagnostic challenge. Over the past several decades, the appearance of pink-pigmented bacteria in clinical specimens has gone from being a microbiologic curiosity in the clinical laboratory to the recognition of

Non-fermenters are a heterogenous group of

Gram-negative bacilli

that are aerobic, non-sporing, either do not

use carbohydrates as a source of energy or

degrade them through metabolic pathways

other than fermentation.

Being ubiquitous in

nature, they were

Get Free Nonfermentative Gram

disregarded as probable contaminants, when isolated in the laboratory.

MEDIA AND 16

LABORATORY

DIAGNOSIS Most

Gram-negative rods
grow on a wide range of
media; some are

Get Free Nonfermentative Gram

Negative, and others are nonselective (also called all-purpose media).

Specific media for different groups will be described under the relevant section. Some of the media commonly used for their isolation are listed in Table 9.1.
