A combination of radiochemistry and radiation chemistry is used to study nuclear reactions such as fission and fusion. Some early evidence for nuclear fission was the formation of a short-lived radioisotope of barium which was isolated from neutron irradiated uranium ( $^{139}\text{Ba}$ , with a half-life of 83 minutes and  $^{140}\text{Ba}$ , with a half-life of 12.8 days, are major fission products of uranium).
