Engineering
Plastic components are

Acces PDF

Plastics

vital components of many engineered products, frequently representing 20-40% of the product value.

While injection molding is the most common process for economically producing complex designs in large quantities, a large initial monetary investment is required to develop appropriate tooling.

Moggridge and Cussler

(2000) proposed
chemical product design
as being comprised of
four essential steps: (1)
identification of
consumer needs that
should be met by the
product, (2) generation
of ideas that can satisfy
the needs, (3) selection

Acces PDF

Plastics

of the most promising product idea, and (4) development of a process to manufacture the desired product.

While it is not stated how these steps should be performed, for steps 2 and 3, use of experiment-based trial and error approaches is common.

Product Design - an
