This book is a valuable contribution to the debate about the harmful effects of environmental toxicants on human health, which is a growing concern in the 21st century. Complementary chapters decipher the phenomena and highlight the latest developments in environmental toxicology, providing readers with a comprehensive overview of environmental toxicology and human health. Since the toxicants in question are not only chemical or biological in nature, but also include man-made electromagnetic fields, the book explores in detail multidisciplinary approaches to environmental toxicology, with a focus on the following five aspects: 1. The effects of man-made electromagnetic fields (RF-EMF) on human health proposed mechanisms and biological effects and measures). 2. An overview of nanotoxicity, nanomedicine and cancer research. 3. A bio-computational approach to the molecular interaction of environmental carcinogens with DNA. 4. The toxicology of environmental pollutants in the air, dust, soil, water and natural toxins in the environment: exposure and health. 5. Social insects as environmental indicators of ecotoxicological effects in different ecosystems. The book analyzes the carcinogenic, mutagenic, genotoxic and neurotoxic effects of both anthropogenic and natural toxins present in water, soil, air and our surroundings in the form of electro-pollution or electro-smog.

An account of Franklin Roosevelt's battle against the power industry to bring electricity to rural communities in the United States. When Franklin Delano Roosevelt took office in the depths of the Depression, high tension?or high voltage?power lines had been marching across the country for decades, delivering urban Americans a parade of life-transforming inventions from electric lights and radios to refrigerators and washing machines. But most rural Americans still lived in the punishing pre-electric era, unconnected to the grid, their lives consumed and bodies broken by backbreaking chores. High Tension is the story of FDR's battle against the “Power Trust,” an elaborate Wall Street-controlled web of holding companies, to electrify all of America?even when the corrupt captains of the industry and their cronies (led by a formidable and honest champion, Wendell Willkie, whose role in the battle propelled him to a presidential bid to unseat Roosevelt in 1940) cried that running lines to rural areas would not be profitable and that in a free market there would simply have to be a divide between the electricity haves and have-nots. Roosevelt knew better. And in this story of shrewd political maneuvering, controversial legislation, New Deal government organizations like the Tennessee Valley Authority, the packing of Federal courts, towering business figures, greedy villains, and the crying needs of farmers and other rural citizens desperate for services critical to their daily lives, John A. Riggs has chronicled democracy's greatest balancing act of government intervention with private market forces. Here is the tale of how FDR's efforts brought affordable electricity to all Americans, powered the industrial might that won World War II, and established a model for public-private solutions today in areas such as transportation infrastructure, broadband, and health care. Praise for High Tension “The little known but captivating story of electricity is at the heart of the New Deal. John A. Riggs is the perfect person to tell the tale.” ?Water Isaacson, author of The Innovators, Leonardo da Vinci, and Steve Jobs “[A] lucid and compelling tale. This is a fresh angle of vision on one of the most important and under-appreciated stories of the first half of the 20th century.” ?Jonathan Alter, author of The Defining Moment: FDR's Hundred Days and the Triumph of Hope “An innovative history of the chaos and conniving that created America's transformative electricity system. . . . A compelling read. Thoroughly researched and gracefully written. . . . A must for historians, it is also a gripping read for all.” ?Martin J. Sherwin, Pulitzer Prize-winning co-author of American Prometheus: The Triumph and Tragedy of J. Robert Oppenheimer “[A]n exhaustive look at President Franklin Roosevelt's multipronged war against the private utility sector. . . . Riggs dives deep into the legislative, judicial, and public opinion battles over Roosevelt's energy initiatives, including the Tennessee Valley Authority, and argues that the hybrid public-private system that emerged in America was critical to the nation's “economic global supremacy” during and after WWII. . . . [T]his authoritative account is a valuable resource for students of America's energy policy.” ?Publishers Weekly

Over the past 100 years the European Automotive Industry has been repeatedly challenged by best practice. First by the United States, through the development of 'mass production' pioneered by Henry Ford and more recently by 'lean production techniques' as practised by the leading Japanese producers, particularly Toyota. It has consistently risen to these challenges and has shown it can compete and even outperform its competitors with world-class products. However, the European - dustry is now faced with growing competition and growth from new emerging low-cost countries and needs to re-define its competitive advantage to remain at the forefront of the sector. Automotive growth is driven by two factors, new m- kets and new technologies. Global competition is increasing, with technology and product differentiation becoming the most important sales factors, but with c- tinued cost pressure. Within the market the winners will be more profitable and the losers will disappear. The Automotive Industry makes a significant contribution to the socio-economic fabric of the European Union. Manufacturing output represents €700 billion and research and development spending €24 billion. European automotive suppliers number 5000 member companies and represent 5 million employees and generate €500 billion in revenues. These are significant figures that generate wealth and high value employment within the EU. European firms must consistently improve their competitive position to ensure that the industry does not migrate to growing new markets.
