The mathematics field of probability has its own rules, definitions, and laws, which you can use to find the probability of outcomes, events, or combinations of outcomes and events. To determine probability, you need to add or subtract, multiply or divide the probabilities of the original outcomes and events. You use some combinations so often that they have their own rules and formulas.

The earliest known forms of probability and statistics were developed by Middle Eastern mathematicians studying cryptography between the 8th and 13th centuries. Al-Khalil (717-786) wrote the Book of Cryptographic Messages which contains the first use of permutations and combinations to list all possible Arabic words with and without vowels. Al-Kindi (801-873) made the earliest known use of

For (a): First, what is the probability that neither of the two senators from CA is chosen among the 10 randomly chosen committee members? That's  $\frac{\binom{98}{2} \binom{2}{0}}{\binom{100}{10}}$ . Second, what is the answer to (a). [Of course Senate committee members are chosen with political agendas in mind, so it's not a realistic question.]
