adenoma, carcinoma, chemoprevention, colon, cyclo-oxygenase 2 (COX-2), non-steroidal anti-inflammatory drug (NSAID) The risk of CRC (colorectal cancer) and the need for preventive strategies CRC is a major cause of cancer deaths in the U.K. Epidemiological studies suggest that dietary factors are very important and that between 50 and 80% of bowel cancers are preventable [ 1 ].

*Prospects in NSAID-derived chemoprevention of colorectal* ...

The PGE synthases and E-prostanoid receptors (EP1-4) have therefore recently attracted considerable interest as potential novel targets for the prevention/therapy of colorectal cancer. Selective (and possibly combinatorial) inhibition of the synthesis and signalling of those PGs most highly associated with colorectal tumorigenesis may have some advantages over COX-2-selective inhibitors.

*Prospects in NSAID-derived chemoprevention of colorectal* ...

Colorectal cancer chemoprevention refers to the administration of natural or synthetic compounds to block, reverse, delay or prevent the development of invasive large bowel neoplasms. The ultimate goal of implementing a chemopreventive intervention in the general, or alternatively, in an at-risk population is to decrease the incidence rate of the specific cancer being targeted.
