Scania Fault Codes Abs - princess.kingsbountygame.com
As a general rule, I suggest that you always check the sensors first, even if the fault says something different. I can save a whole lot of time and effort. I use the Drakefield SensorMaster to check the sensors - it's quick and easy, and can pinpoint a sensor fault in seconds without the need for any other diagnostic equipment.

Volvo and Scania EBS-5 Faults - ew
Scania R480 | Scania R480 - Poor idle, misfire, smoke and fault codes. I was recently asked to take a look at a 12.3 litre HGV. Trying not to be daunted by the fact that this thing was huge and that the last time I worked on an HGV was about 8 years ago, the one thing that kept creeping back into my mind was what they told me when I started in the trade: The fundamentals are the same in any ICE (internal combustion engine).

Scania R480 - Poor idle, misfire, smoke and fault codes
On Scania you may have a problem from the sensors of cooling agent from retarder (there are two) before the retarder on a pipe along the chassis. Another cause is a faulty ABS sensor on the truck or a pulls ring broken (a tooth missing or bent). An electric fault from ABS (EBS) computer, and so on but not a fault from the trailer.

SCANIA - COG Faulty - Retarder and a lots of Faulty Codes -
If a value is within these intervals, a fault code is generated. 571 Disengaging engine shutdown If the function is active, the engine continues to run even if a fault code is generated which specifies that the engine should stop due to safety reasons. The function is activated by connecting the pin to U15.

Industrial engines DC09, DC13, DC16 Marine - Scania Group
Fault codes are stored in 2 different memory segments of the control unit. When the codes are erased by the diagnostic switch, all fault codes are cleared, which are indicated by the flashing of the alarm lamp. However, the fault codes remain in another memory segment, access to which is possible only with the help of a diagnostic scanner.
