Solution, in chemistry, a homogenous mixture of two or more substances in relative amounts that can be varied continuously up to what is called the limit of solubility. The term solution is commonly applied to the liquid state of matter, but solutions of gases and solids are possible.

solution | Definition & Examples |
Britannica

A chemical solution exhibits several properties: A solution consists of a homogeneous mixture. A solution is composed of one phase (e.g., solid, liquid, gas). Particles in a solution are not visible to the naked eye. A solution does not scatter a light beam. Components of a solution cannot be ...

A solution is a homogeneous mixture of two substances—that is, it has the same distribution of particles throughout. Technically speaking, a solution consists of a mixture of one or more solutes dissolved in a solvent. The particles of solute and solvent are molecules or ions, with one or more solvent molecules bound to each solute particle.

solution using a solid dissolved in a liquid, such as water or alcohol. If you don't need to be very accurate, you can use a beaker or Erlenmeyer flask to prepare a solution. More often, you'll use a volumetric flask to prepare a solution so that you'll have a known concentration of solute in solvent.

How To Prepare Chemical Solutions - ThoughtCo

In chemistry, a solution is defined as a homogenous mixture of two or more compounds, where one compound is the solvent and the other compounds are solutes. As a rule of thumb, the compound with the greatest mass is considered to be the solute. The ratio between the solvent and solute is usually denoted in two ways.

In chemistry, we define concentration of solution as the amount of solute in a solvent. When a solution has more solute in it, we call it a concentrated solution. Whereas when the solution has more solvent in it, we call it a dilute solution.

When the components of a mixture are uniformly intermingled, or when a mixture is homogeneous, it is called a solution. Aqueous solutions, those containing water, are the most common solutions. There are several to define the concentration of a solution depending
