Principles of Taxonomy 1. Why is a system of classification needed? a. Organize species into groups and discuss them. b. Identify new organisms. c. Show relationships between organisms. 2. Taxonomy is the science of classifying organisms. a.

**Principles of Taxonomy Notes - PDF Free Download**

Taxonomy and Classification, Ziser Lecture Notes, 20044. 1. emphasized morphological characteristics as the basis for arranging specimens in a collection 2. each species is given a unique scientific name. while some species can have 100's of common names each has only one binomial name. 3.

**taxonomy & Classification**

According to Mayr (1982), “Taxonomy is the theory and practice of classifying organisms”. Taxonomy is thus an information system comprising of classification, nomenclature, descriptions and identification.

**Taxonomy: Definition, Scope and Levels - Zoology Notes**

December 07, 2011Carl von Linnaeus: “The Father of Modern Taxonomy” Our system of classification is based on his idea. He was the first to classify organisms into groups. He called his groups "taxa."

**Taxonomy notes pdf - SlideShare**

The definition of a species is if two organisms can produce fertile offspring. Whilst some members of different species can reproduce to make offspring, the offspring are infertile and therefore classes as hybrids and not a species. E.g. a lion and a tiger can reproduce to make a liger or a tion. Two other factors than can also be considered too.
