The steps to successfully introducing teeth whitening into your practice Andrew Wallace talks about his steps to success using the Philips Zoom! tooth whitening system. Dentists have been providing tooth whitening for many years now.

The steps to successfully introducing teeth whitening ...

The dentist would first record the shade of your teeth, to get a glimpse of the current whiteness of your teeth, the extent to which it could be whitened, and the concentration of the solution that would be required for an ideal whitening. Upon the completion of this step, the dentist would then move to the core steps involved in teeth whitening.

5 Steps Of Professional Teeth Whitening

The professional teeth whitening process starts with a consultation with your dentist. Not everyone is a good candidate for teeth whitening, which is why you want to talk to a dentist before you have it done. If you have large fillings or crowns (caps) on your front teeth, teeth bleaching is not a good idea.

When placing the white strips, be sure to align them with the gum line. Apply some gentle pressure against the teeth and fold the bottom part behind the teeth. Repeat for the bottom set of teeth. The shorter strip is for the lower set of teeth. Don't worry too much about the white strips being perfectly placed.

How to Use Teeth Whitening Strips in 5 Simple Steps

Dip your toothbrush in hydrogen peroxide, then dip it in baking soda. Brush your teeth for 2 minutes, then rinse well. While baking soda is less abrasive than activated charcoal, it's still abrasive. Use this treatment no more than 2 or 3 times a week, and don't use it as a substitute for regular brushing and flossing.

3 Simple Ways to Use Activated Charcoal for Teeth Whitening

【TEETH WHITENING KIT】 : Using high-intensity blue light, after special optical treatment, it removes all harmful ultraviolet and infrared rays, and cooperates with teeth whitening gel to quickly produce the effect of removing the pigment on the tooth surface and deep layer to achieve whitening effect.

Teeth enamel can have an adverse negative effect by whitening treatment. Evidence from studies show that carbamide peroxide present in whitening gels can damage the enamel surface. Although this effect is not as damaging as phosphoric acid etch, [60] the increased irregularity of the teeth surface makes the teeth more susceptible to extrinsic staining, thus having an increased detrimental effect on the aesthetics.
