Path dependence has also been of considerable interest to geographers, and is one of the central ideas underpinning evolutionary economic geography. For economic geographers, path dependence is often constructed as a form of place dependence in which local or regional outcomes are, in one way or another, shaped by past events and outcomes (Plummer and Tonts, 2013a).

Mutational analysis revealed specific epistatic interactions that explained the observed path dependence and irreproducibility. Our results reveal in molecular detail how protein adaptation to different environments, as well as stochasticity among populations evolved in the same environment, can both generate evolutionary outcomes that preclude subsequent convergence.

Abstract. Based on learning theory, this study introduces a distinction into three orders (zero, first, second) of path dependence. Applying econometric time series analysis (VAR models), we explore the order of path dependence in firm investment, divestment, and cooperation decisions. An extension to prior research, we not only investigate the order of path dependence for each type of portfolio decision but also investigate the order of path dependence in firms ' collective portfolio ...

The path dependence approach highlights continuities and changes between past and current practices in the organization of partnerships and in their activities. It helps establish if partnerships fundamentally alter the policy environment and practical outcomes, and thus if they are path-creating and innovative, and it also assists in explaining the influences on these processes.
