Supercomputers have been built that can operate at 20 petaflops (roughly the hardware-equivalent of the human brain according to Kurzweil). Consumer-level computers across the world can network together to form decentralized supercomputers, many of which have the computational capacity of the human brain.

Predictions made by Ray Kurzweil—Wikipedia

In his Letter to the Sorbonne published at the beginning of his seminal work, Meditations on First Philosophy, Descartes states that his purpose in showing that the human mind or soul is really distinct from the body is to refute those " irreligious people " who only have faith in mathematics and will not believe in the soul ' s immortality without a mathematical demonstration of it. Descartes goes on to explain how, because of this, these people will not pursue moral virtue without the ...

Descartes: Rene: Mind-Body Distinction | Internet —

The mind is the set of faculties including cognitive aspects such as consciousness, imagination, perception, thinking, intelligence, judgement, language and memory, as well as noncognitive aspects such as emotion and instinct. Under the scientific physicalist interpretation, the mind is produced at least in part by the brain.
