On the open landscape of Israel and the West Bank, where pine and cypress forests grow alongside olive groves, tree planting has become symbolic of conflicting claims to the land. Palestinians cultivate olive groves as a vital agricultural resource, while the Israeli government has made restoration of mixed-growth forests a national priority. Although both sides plant for a variety of purposes, both have used tree planting to assert their presence on—and claim to—disputed land. Shaul Ephraim Cohen has conducted an unprecedented study of planting in the region and the control of land it signifies. In The Politics of Planting, he provides historical background and examines both the politics behind Israel’s afforestation policy its consequences. Focusing on the open land surrounding Jerusalem and four Palestinian villages outside the city, this study offers a new perspective on the conflict over land use in a region where planting has become a political tool. For the valuable data it presents—collected from field work, previously unpublished documents, and interviews—and the insight it provides into this political struggle, this will be an important book for anyone studying the Israeli-Palestinian conflict.

On the ground with Israelis and Palestinians even as some of the deadliest fighting erupted in summer 2006, Salinas invites us to share in his research and interviews to understand the thinking fueling on of the longest and most volatile conflicts in modern history, and how the obstacles to peace are as psychological as they are political.

In this up-to-date study of the Israeli economy, Assaf Razin and Efraim Sadka cover the entire economic history of the state, focusing on links between Israel’s economic growth, its integration into world markets, its tax and welfare systems, and the political conflicts in the Middle East. The authors present the first detailed economic analysis of the Palestinian uprising, showing how the unrest has led to a fall in Arab employment in Israel and serious economic loss to the occupied territories with some loss to Israel. They also examine how the uprising has affected Israel’s financial standing internationally and the inflow of foreign aid. Razin and Sadka see promise for Israel’s economy in the waves of immigration from the former Soviet Union, despite the current difficulties in absorbing the immigrants; in the coexistence of a flourishing and highly competitive private sector with a relatively large public sector, which is undergoing privatization; and in a tax structure that encourages long-term saving and business growth. By examining the interplay between the exchange rate, interest rates, and monetary and anti-inflation policies, the authors investigate the possibilities for renewed growth and conclude that the future of Israel’s economy crucially depends on serious efforts to secure peace in the Middle East.

Dumper explores how religious and political interests compete for control of the Old City of Jerusalem, and how this competition affects the Middle East conflict as a whole.

This book constitutes the first attempt at a comprehensive description, history, and analysis of Israel’s economy. Plessner examines events of the past two decades and advances the hypothesis that problems within the Israeli economy can be explained by the extent of its departure from the institutions and rules that govern predominantly market economies. He argues that Israel is unusual in that it affords an opportunity to analyze a socialized economy embedded in a democratic society. Individual chapters describe Israel’s economic growth and stagnation, the government’s domination of capital and credit markets, and the absence of a truly independent private sector. The concluding chapter evaluates the stabilization program of the 1980s and its aftermath and provides a prognosis for the future. Told within the framework of the story of Zionism and the creation of the Jewish state, this book answers the question of why the Israeli economy finds itself today in the same state in which it has languished since 1973.

The political conflict over the city of Jerusalem has resulted in the breach of Palestinian Jerusalemites’ civil, political and social rights. While Israel claims sovereignty over East Jerusalem, it neglects to provide adequate services to the Palestinian residents of the city. The Israeli Jerusalem Municipality provides insufficient and highly politicised educational services to the Palestinians residents of the city, at the same time discriminating against the other Palestinian systems that provide educational services. Political Conflict and Exclusion in Jerusalem offers a detailed description of the structure of the education sector in East Jerusalem with its four main providers: the Palestinian Authority through Awqaf schools, the Israeli Authority through municipal schools, the United Nations Relief and Works Agency and private schools. Its study reveals that there is no single body that oversees the provision of educational services in the city to ensure that the services provided are sufficient and of quality. Employing a qualitative research strategy with semi-structured interviews and focus groups in Palestinian and Israeli schools, this book offers a comprehensive and revealing companion of the educational services provided to both their students. It explores how Palestinian and Israeli students routinely receive vastly different learning opportunities, in terms of school funding, qualified staff, school facilities and school programmes, which as a result disempowers Palestinians and ensures an Israeli Jewish hegemony over the city. One of the few academic books on a highly pertinent topic, this book will be of interest to students and scholars of Middle East Studies, and a key resource for those studying the social impacts of the Israeli-Palestinian conflict.

When do words and actions empower? When do they betray? Based on ethnographic fieldwork, this volume tracks the repercussions of advocacy activism against house demolitions in ‘unrecognised’ Arab-Bedouin villages in Israel’s southern ‘internal frontier’. It highlights the repercussions of activism for victims, fund-raisers and activists. The ethnographic episodes show how humanitarian aid intervention and indigenous identity politics can turn into a double-edged sword. Ironically, institutional lobbying for coexistence and its interpretative categories can sometimes perpetuate different forms of subjugation. The volume also shows how, beyond the institutional lobbying, novel figures of activism emerge: informal networks create non-sectarian, cross-cutting countercultures and rethink human-environment relationships. These experimental political subjects redefine the categories of the conflict and elude the logic of zero-sum games; they point towards a shifting paradigm in current ethnopolitics. Koensler outlines an ethnographic approach for the study of social movements that follows multiple relations around mobilisations rather than studying activism in itself. This perspective thus becomes relevant for scholars and activists engaged with the Israeli-Palestinian conflict and those interested in global rights discourses.

Digital practices in social and political landscapes: Why two researchers can look at the same feature and see different things. Maps are widely believed to be objective, and data-rich computer-made maps are iconic examples of digital knowledge. It is often claimed that digital maps, and rational boundaries, can solve political conflict. But in Mapping Israel, Mapping Palestine, Jess Bier challenges the view that digital maps are universal and value-free. She examines the ways that maps are made in Palestine and Israel to show how social and political landscapes shape the practice of science and technology. How can two scientific cartographers look at the same geographic feature and see fundamentally different things? In part, Bier argues, because knowledge about the Israeli military occupation is shaped by the occupation itself. Ongoing injustices—including checkpoints, roadblocks, and summary arrests—mean that Palestinian and Israeli cartographers have different experiences of the landscape. Palestinian forms of empirical knowledge, including maps, continue to be discounted. Bier examines three representative cases of population, governance, and urban maps. She analyzes Israeli population maps from 1967 to 1995, when Palestinian areas were left blank; Palestinian state maps of the late 1990s and early 2000s, which were influenced by Israeli raids on Palestinian offices and the legacy of British colonial maps; and urban maps after the Second Intifada, which show how segregated observers produce dramatically different maps of the same area. The geographic production of knowledge, including what and who are considered scientifically legitimate, can change across space and time. Bier argues that greater attention to these changes, and to related issues of power, will open up more heterogeneous ways of engaging with the world.

-- Michael C. Hudson, Georgetown University

This book analyzes the changes and tendencies expressed in the relation between army and society in Israel. Since its inception, Israel has been defined as a nation in arms, a public space in which the security needs became central and, to a great extent, dictated the agenda and functioning of all the public arenas operating in it. The theoretical investigation is accompanied by case study illustrations of special instances related to the nexus between: security and society security and politics the army and the media the army and public relations security and culture bereavement and commemoration social motivation to serve in the army the army and foreign policy. Lebel explores the connection between the military and culture in Israel against the backdrop of globalization, individualism, liberalism, and social burn-out in the face of survival and change.
