~~for Windows NT~~

There are two  
groups of

Windows NT

device drivers

- monolithic  
and layered. A

monolithic

device driver

represents one  
piece of

hardware (a data-  
acquisition

board, for

Read Online

The Windows Nt

instance), while a layered driver sits on top of another driver (or between two drivers) forming a hierarchy.

SCSI and network drivers are examples of layered drivers.

Device drivers run in NT's kernel mode,
