By January 2015 the world's richest 80 people had as much wealth as the poorest 50 per cent of the world's population. It is a global unevenness through which the barriers to immigration of Third World migrants to wealthy First World nations go ever higher, while the barriers to travel in the reverse direction are all but extinct. So how exactly does tourism contribute to narrowing this glaring inequality between the rich and poor? Are ever-expanding tourism markets a smoke-free, socioculturally sensitive form of human industrialisation? Is alternative tourism really a credible lever for reducing global inequality and eliminating poverty? Tourism and Sustainability critically explores the most significant universal geopolitical norms of the last half century – development, globalisation and

The fourth edition has been extensively revised and updated, and benefits from the addition of new material on climate change and tourism. Drawing on a range of examples from across the Third World, Mowforth and Munt expertly illustrate the social, economic and environmental conditions that continue to affect the tourism industry. With the first edition hailed by Geoffrey Wall as ‘one of the most significant books produced on tourism [since the turn of the millennium]’, *Tourism and Sustainability* remains the essential resource for students of human geography, environmental sciences and studies, politics, development studies, anthropology and business

Tourism In The Third World

"If unequal opportunities are large within many countries they are truly staggering on a global scale", so concludes the World Bank's 2006 World Development Report. It is a global unevenness within which the barriers to in-migration of Third World migrants to wealthy first world nations go ever higher, whilst the barriers to travel in the reverse direction are all but extinct. So how exactly can tourism contribute to narrowing this glaring inequality and gap between the rich and the poor? Are ever expanding tourism markets – and the new, responsible, forms of tourism in particular – a smoke free, socio-culturally sensitive form of human industrialisation? stricken countries out of the mire of global inequality, setting them on the right track to 'development', and making poverty history? Tourism and Sustainability critically explores and challenges what have emerged as the most significant universal geopolitical norms of the last half century – development, globalization and sustainability – and through the lens of new forms of tourism demonstrates how we can better understand and get to grips with the rapidly changing new global order. This third edition has been extensively updated and includes new material on: poverty reduction, livelihoods and pro-poor tourism new forms of tourism in cities continuing growth of the fair trade movement tourism's contribution to climate change volunteer and 'gap' tourism affect of disasters on new tourism.

Drawing on a range of examples from across the Third World, *Tourism and Sustainability* illustrates the social, economic and environmental conditions for the growth of new tourism. The book is original in its assessment of tourism through the lens of power – who holds it; how it is used; and who benefits from the exercise of power in the tourism industry. Additionally, the analysis is an interdisciplinary one and the book will therefore be useful to students of Human Geography, Environmental Sciences and Studies, Politics, Development Studies, Anthropology and Business Studies as well as Tourism itself.

development paradigm that has come to dominate both theoretical and practical approaches to tourism development over the last two decades. It extends the sustainable tourism debate beyond the arguably managerialist 'blueprint' and destination-focused approach that continues to characterise even the most recent 'sustainability' agenda within tourism development. Reviewing the evolution of the sustainable tourism development concept, its contemporary manifestations in academic literature and policy developments and processes, the author compares its limitations to prevailing political-economic, socio-cultural and environmental contexts. He then proposes alternative approaches to tourism development which,

nevertheless, retain environmental sustainability as a prerequisite of tourism development. This book also acts as an introduction to the Earthscan series Tourism, Environment and Development. About the series: 'Tourism, Environment and Development' aims to explore, within a variety of contexts, the developmental role of tourism as it relates explicitly to its environmental consequences. Each book will review critically and challenge 'traditional' perspectives on (sustainable) tourism development, exploring new approaches that reflect contemporary economic, socio-cultural and political contexts.

Tourism is widely considered to be an important factor in socio-economic development, particularly in less developed countries. However, despite

almost universal recognition of tourism's development potential, the extent to which economic and social progress is linked to the growth of a country's tourism sector remains the subject of intense debate. *Tourism and Development in the Developing World* offers a thorough overview of the tourism-development relationship. Focusing specifically on the less developed world and drawing on contemporary case studies, this updated second edition questions widely-held assumptions on the role of tourism in development and seeks to highlight the challenges faced by destinations seeking to achieve development through tourism. The introductory chapter establishes the foundation for the book, exploring the meaning and objectives of development, reviewing theoretical

perspectives on the developmental process, and assessing the reasons why less developed countries are attracted to tourism as a development option. The concept of sustainable development, as the most widely adopted contemporary model of development, is then introduced and its links with tourism critically assessed. Subsequent chapters explore the key issues associated with tourism and development, including the rise of globalization; the tourism planning and development process; the relationship between tourism and communities within which it is developed; the management implications of trends in the demand for and uptake of tourism; and an analysis of the consequences of tourism development for destination environments, economies and

Societies. A new chapter considers the challenges of climate change, sustainability of resource supply (oil, water and food), global economic instability, political instability and changing demographics. Finally, the issues raised throughout the book are drawn together in a concluding chapter that assesses the tourism and development 'dilemma'. Combining an overview of essential concepts, theories and knowledge with an analysis of contemporary issues and debates in tourism and development, this new edition will be an invaluable resource for those investigating tourism issues in developing countries. The book will be of interest to students of tourism, development, geography and area studies, international relations and politics, and sociology.

The global popularity of outdoor recreation and ecotourism is on the increase. At present, there is little systematic information on the management practices that have been successful in National Parks. This book presents the issue of how to manage outdoor recreation in ways that protect the integrity of park resources and the quality of the visitor experience. Using case studies drawn from the U.S. National Park System, it illustrates a range of successful management approaches that can be applied worldwide.

deeper understanding of the challenges posed by radical socioeconomic, environmental, and cultural changes due to globalization and describes effective, sustainable solutions to these challenges. The focus is especially on the rapid urbanization processes in countries of the Global South, which are giving rise to dramatic new problems of spatial and social inequality and difficult environmental challenges in relation to climate change. Readers will gain skills and knowledge that will help them to develop an integrated, multidisciplinary approach to planning, design, and management of urban settlements and territories in contexts with a high level of social, economic, territorial, and landscape vulnerability. The coverage includes, for example, strategies to promote social inclusion,
