In the quote above, the Garo leader Sonaram R. Sangma is being questioned in court about his role in instigating the Garos to oppose the colonial intrusion into their hills. Deemed a “professional agitator” and “a man of dangerous character,” Sangma had earlier been imprisoned and, at his release, forbidden to return to the Garo Hills.

During the last decade, indigenous youth from Northeast India have migrated in large numbers to the main cities of metropolitan India to find work and study. This migration is facilitated by new work opportunities in the hospitality sector, mainly as service personnel in luxury hotels, shopping malls, restaurants and airlines. Prolonged armed conflicts, militarization, a stagnant economy, corrupt and ineffective governance structures, and the harsh conditions of subsistence agriculture in their home villages or small towns impel the youth to seek future prospects outside their home region. English language skills, a general cosmopolitan outlook as well as a non-Indian physical appearance have proven to be key assets in securing work within the new hospitality industry. Leaving the Land traces the migratory journeys of these youths and engage with their new lives in cities like Bangalore, Mumbai, Hyderabad and Thiruvananthapuram.

The questions that inspired this study are central to contemporary research within environmental anthropology, political ecology, and environmental history: How does the introduction of a modern, capitalist, resource regime affect the livelihood of indigenous peoples? Can sustainable resource management be achieved in a situation of radical commodification> of land and other aspects of nature? Focusing on conflicts relating to forest management, mining, and land rights, the author offers an insightful account of present-day challenges for indigenous people to accommodate aspirations for ethnic sovereignty and development.

In the Himalayas of the Indian part of Kashmir three communities depend on the ecology of the Dal lake: market gardeners, houseboat owners and fishers. Floating Economies describes for the first time the complex intermeshing economy, social structure and ecology of the area against the background of history and the present volatile socio-political situation. Using a holistic and multidisciplinary approach, the author deals with the socioeconomic strategies of the communities whose livelihoods are embedded here and analyses the ecological condition of the Dal, and the reasons for its progressive degradation.

Urban forests, trees and greenspace are critical in contemporary planning and development of the city. Their study is not only a question of the growth and conservation of green spaces, but also has social, cultural and psychological dimensions. This book brings a perspective of political ecology to the complexities of urban trees and forests through three themes: human agency in urban forests and greenspace; arboreal and greenspace agency in the urban landscape; and actions and interventions in the urban forest. Contributors include leading authorities from North America and Europe from a range of disciplines, including forestry, ecology, geography, landscape design, municipal planning, environmental policy and environmental history.

This book asks how we are to understand the relationship between capitalism and the environment, capitalism and food, and capitalism and social resistance. These questions come together to form a study of food regimes and the means by which capitalism organises both the environment and people to provision its distinctive system of ever-expanding consumption with food. Political Ecology, Food Regimes, and Food Sovereignty explores whether there are environmental limits to capitalism and its economic growth by addressing the ongoing and inter-linked crises of food, fossil fuels, and finance. It also considers its political limits, as the globally burgeoning 'precariat', peasants and indigenous people resist the further commodification of their livelihoods. This book draws from the field of Political Ecology to approach new ways of analysing capitalism, the environment and resistance, and also to propose new solutions to the current agro-ecological-economic crisis. It will be of particular interest to students and academics of Environmental Sociology, Human Geography, and Environmental Geography.

Contains papers from a September 1993 workshop on the privatization of agriculture in Eastern Europe, exploring the situation in several countries. Discusses reform policies and actual processes of land reform, the emergence of new family farms, and the creation of new forms of cooperative and joint stock company, with papers on land reform in a Bulgarian village, redefining women's work in rural Poland, and decollectivization and total scarcity in High Albania. Annotation copyright by Book News, Inc., Portland, OR

Power and social inequality shape patterns of land use and resource management. This book explores this relationship from different perspectives, illuminating the complexity of interactions between human societies and nature. Most of the contributors use the perspective of "political ecology" as a point of departure, recognizing that human relations to the environment and human social relations are not separate phenomena but inextricably intertwined. What makes this volume unique is that it sets this approach in a trans-disciplinary, global, and historical framework.

In River Dialogues, Georgina Drew offers a detailed ethnographic engagement with the social movements contesting hydroelectric development on the Ganga River. The book examines the complexity of the cultural politics that, on the one hand, succeeded in influencing an unprecedented reversal of government plans for three contested hydroelectric projects, and how, on the other hand, this decision sparked ripples of discontent after being paired with the declaration of a conservation zone where the projects were situated. It critically engages with the growing global advocacy of the green economy model for environmental stewardship."

The world is caught in the mesh of a series of environmental crises. So far attempts at resolving the deep basis of these have been superficial and disorganized. Global Political Ecology links the political economy of global capitalism with the political ecology of a series of environmental disasters and failed attempts at environmental policies. This critical volume draws together contributions from twenty-five leading intellectuals in the field. It begins with an introductory chapter that introduces the readers to political ecology and summarizes the books main findings. The following seven sections cover topics on the political ecology of war and the disaster state; fuelling capitalism: energy scarcity and abundance; global governance of health, bodies, and genomics; the contradictions of global food; capital’s marginal product: effluents, waste, and garbage; water as a commodity, a human right, and power; the functions and dysfunctions of the global green economy; political ecology of the global climate, and carbon emissions. This book contains accounts of the main currents of thought in each area that bring the topics completely up-to-date. The individual chapters contain a theoretical introduction linking in with the main themes of political ecology, as well as empirical information and case material. Global Political Ecology serves as a valuable reference for students interested in political ecology, environmental justice, and geography.
