Volume of Pyramids and Cones | Geometry - Quizizz

The volume of a pyramid is one third of the volume of a prism. $V = \frac{1}{3} B h$. The base of a cone is a circle and that is easy to see. The lateral surface of a cone is a parallelogram with a base that is half the circumference of the cone and with the slant height as the height.

Pupils learn to calculate the volume of pyramids and cones using the relevant formula. There is a selection of harder questions to challenge the more able on the sheet. In the powerpoint is a link to a demonstration of the formula (not involving calculus as students studying this topic most likely will not have encountered this yet!).

Volume of Pyramids and Cones | Teaching Resources

The formula for the volume of pyramids and cones tells you how much space is inside each object. For these two solid shapes, the volume formula is the same: it's one-third of the area of the base times the height. Volume of Pyramids or Cones = $\frac{1}{3}$ Area of Base \times height = $\frac{1}{3}Bh$ Area of base \times height, or Bh ?
