Why Stock Markets Crash: Critical Events in Complex ...

market capitalization has shrunk to a mere \$25.1 trillion. A stock market crash of 30% would still correspond to an absolute loss of about \$7.5 trillion dollars. Market crashes can thus swallow years of pensions and savings in an instant. Could they make us suffer even more by being the precursors or triggering factors of major recessions, as in 1929–33

enabling researchers in both the natural and social sciences to model and predict phenomena as diverse as earthquakes, global warming, demographic patterns, financial crises, and the failure of materials.

Why Stock Markets Crash: Critical Events in Complex ...

Most attempts to explain market failures seek to pinpoint triggering mechanisms that occur hours, days, or weeks before the collapse. Sornette proposes a radically different view: the underlying cause can be sought months and even years before the abrupt, catastrophic event in the build-up of cooperative speculation, which often translates into an accelerating rise of the market price, otherwise known as a "bubble."
