The debate rages over whether this behavior implies that most ; are optional (and can/should be omitted for cleaner code) or whether it means that omitting them is making mistakes that the JS engine merely cleans up for you.

JavaScript has several types of errors, but it's less known that it has two classifications for errors: "early" (compiler thrown, uncatchable) and "runtime" (try..catchable). All syntax errors are obviously early errors that stop the program before it runs, but there are ...
